Research Title:

Enhancing Reading Proficiency Among Grade 2 Struggling Readers Through Reading Intervention Materials (RIM) in Albay Central School

READING PROFICIENCY ASSESSMENT (RPA)

Pre-test (Form A) and Post-test (Form B)
Grade 2 – Albay Central School, School Year 2026–2027

The Reading Proficiency Assessment is a researcher-made, individually administered test that measures the reading proficiency of Grade 2 struggling readers in four areas: letter-sound knowledge, word recognition, reading fluency, and reading comprehension. Form A will be used as the pre-test and Form B as the post-test. The two forms have the same structure, number of items, passage length (78 words), and question types, so that their results can be compared.

General Directions for the Examiner

1. Administer the test to one learner at a time in a quiet room, at a time that does not conflict with regular classes. Each administration takes about 15 to 20 minutes.
2. Give the Learner's Copy to the learner and record all responses on the Examiner's Score Sheet. Use Form A for the pre-test and Form B for the post-test.
3. Read the directions in Filipino exactly as written. You may repeat or explain the directions in Bikol, but never read an item for the learner.
4. With parental consent, audio-record Parts III and IV so that a second rater can verify the scores.
5. Do not give hints or correct the learner during the test. Praise effort, not correctness (e.g., "Magaling, salamat sa pagsubok!").
6. Part II: stop if the learner misses 10 words in a row. Part III: if the learner cannot read any word in the first sentence, stop and record 0 for Parts III and IV.

Scoring Guide

Part	Items	Scoring
I. Letter-Sound Knowledge	20 letters	1 point for each correct letter sound
II. Word Recognition	30 words (20 decodable, 10 high-frequency)	1 point for each word read correctly within three seconds
III. Reading Fluency	78-word passage	Accuracy = (78 − miscues) ÷ 78 × 100; Words Correct per Minute (WCPM) = words read in one minute − miscues in that minute
IV. Reading Comprehension	10 questions (6 literal, 4 inferential)	1 point for each correct answer; accept answers with the same meaning

Note. Count as miscues: mispronunciation, substitution, omission, insertion, reversal, transposition, and words supplied by the examiner after a three-second pause. Self-corrections are not counted.

FORM A – PRE-TEST: LEARNER'S COPY

Bahagi I. Sabihin ang tunog ng bawat letra.

m	s	a	t	b
k	i	l	o	p
n	e	g	u	r
d	y	h	w	ng

Bahagi II. Basahin ang bawat salita.

bata	mesa	puno	bola	saya
lobo	kama	tasa	kahon	bahay
alon	aklat	lapis	sabon	bulaklak
kalabaw	paaralan	halaman	matamis	malinis
ang	mga	sa	ay	ito
the	is	and	go	my

Bahagi III. Basahin nang malakas ang kuwento.

Si Ana sa Palengke

Maagang gumising si Ana. Sumama siya kay Nanay sa palengke. Malamig pa ang hangin sa umaga. Habang naglalakad, nakita ni Ana ang Bulkang Mayon. Tatsulok ang hugis nito at may puting ulap sa tuktok.

Sa palengke, bumili si Nanay ng isda, gulay, at pili. Tinulungan ni Ana si Nanay sa pagdadala ng basket. Mabigat ang basket, pero hindi nagreklamo si Ana.

Pag-uwi nila, nagluto si Nanay ng masarap na ulam. Masaya si Ana dahil nakatulong siya kay Nanay.

FORM A – PRE-TEST: EXAMINER'S SCORE SHEET

Learner Code: _____ Section: _____ Date: _____
Examiner: _____

Part I. Letter-Sound Knowledge (20 points)

Say: *"Ituturo ko ang bawat letra. Sabihin mo ang tunog nito."*

No.	Letter	Sound	Score (1/0)	No.	Letter	Sound	Score (1/0)

INTERPRETATION OF SCORES

Scores in letter-sound knowledge and word recognition are converted to percentages and interpreted using Table 1. Reading accuracy and reading comprehension are interpreted using the Phil-IRI reading levels in Table 2. Reading rate (WCPM) is reported as is.

Table 1. *Scale for Interpreting Letter-Sound Knowledge and Word Recognition Scores*

Percentage Score	Proficiency Level	Description
90–100	Proficient	Demonstrates the skill accurately and consistently
75–89	Approaching Proficiency	Demonstrates the skill with minor errors
50–74	Developing	Demonstrates the skill inconsistently; needs guidance
Below 50	Beginning	Has not yet acquired the skill; needs intensive support

Table 2. *Phil-IRI Reading Levels for Word Reading Accuracy and Comprehension*

Reading Level	Word Reading Accuracy	Comprehension
Independent	97–100%	80–100%
Instructional	90–96%	59–79%
Frustration	89% and below	58% and below

RESULTS OF THE PRE-TEST AND POST-TEST

Note: *The data in this section are hypothetical. They were constructed to show how the pre-test and post-test results of the study will be organized, analyzed, and interpreted, and will be replaced with the actual data after the conduct of the study. All statistics were computed from these hypothetical scores and pilot-test data.*

Validity and Reliability of the Test

Table 3 summarizes the results of the validation and pilot testing. After four items with an I-CVI of .67 were revised, the test reached an S-CVI/Ave of .96. In the pilot test with 25 Grade 2 learners outside the study, the KR-20 coefficients ranged from .81 to .89 for both forms, the two forms were strongly correlated (r = .92) and did not differ significantly (t(24) = 0.03, p = .980), and the second rater agreed with the researcher on 95.7 percent of the words read in the oral reading recordings. The test therefore yields valid, reliable, and consistently scored data, and Forms A and B are equivalent.

Table 3. *Validity and Reliability of the Research Instruments*

Instrument	Index	Result	Standard	Interpre-tation
Reading Proficiency Assessment	Content validity (6 experts, 62 items)	I-CVI = .67–1.00; 4 items revised; S-CVI/Ave = .96	I-CVI ≥ .78; S-CVI/Ave ≥ .90	Excellent
	Part I reliability (KR-20)	Form A = .81; Form B = .85	≥ .70	Good
	Part II reliability (KR-20)	Form A = .89; Form B = .86	≥ .70	Good
	Part IV reliability (KR-20)	Form A = .85; Form B = .81	≥ .70	Good
	Equivalence of Forms A and B (n = 25)	r = .92, p < .001; t(24) = 0.03, p = .980	Strong positive r; no significant mean difference	Equivalent
	Inter-rater agreement (oral reading)	95.7% (6 recordings, 468 words)	≥ 90%	Acceptable
Acceptability Evaluation Tool	Content validity (6 experts, 20 items)	I-CVI = .67–1.00; 1 item revised; S-CVI/Ave = .93	I-CVI ≥ .78; S-CVI/Ave ≥ .90	Excellent
	Internal consistency (Cronbach's alpha)	α = .86 (8 teachers)	≥ .70	Good

Individual Scores

Table 4 presents the individual pre-test and post-test scores of the 15 Grade 2 struggling readers.

Table 4. *Individual Pre-test and Post-test Scores of the Learners*

Note. LSK = Letter-Sound Knowledge (20 items); WR = Word Recognition (30 items); Acc. = Reading Accuracy; WCPM = Words Correct per Minute; RC = Reading Comprehension (10 items).

Reading Proficiency Before and After the Intervention (Objectives 1 and 3)

As shown in Table 5, the overall reading proficiency of the learners rose from a mean of 51.59 percent in the pre-test to 67.08 percent in the post-test, both within the Developing level. Letter-sound knowledge rose from 56.7 to 74.0 percent, close to the Approaching Proficiency threshold, and word recognition moved from the Beginning level (40.2 percent) to the Developing level (58.2 percent). Reading accuracy increased from 75.47 to 83.42 percent and reading rate from 23.07 to 32.67 words correct per minute, but mean accuracy remained within the frustration level. Comprehension improved from 34.0 to 52.7 percent yet also stayed at the frustration level on average, which suggests that comprehension develops more slowly than word-level skills and needs continued support. The larger standard deviations in the post-test show that the learners responded to the intervention at different rates.

Table 5. *Pre-test and Post-test Reading Proficiency of the Learners*

Reading Area	Pre-test Mean (SD)	%	Level	Post-test Mean (SD)	%	Level
Letter-Sound Knowledge (20)	11.33 (2.58)	56.7	Developing	14.80 (4.16)	74.0	Developing
Word Recognition (30)	12.07 (3.84)	40.2	Beginning	17.47 (6.33)	58.2	Developing
Reading Fluency: Accuracy (%)	75.47 (6.41)	75.5	Frustration	83.42 (10.39)	83.4	Frustration
Reading Comprehension (10)	3.40 (1.24)	34.0	Frustration	5.27 (2.34)	52.7	Frustration
Reading Rate (WCPM)	23.07 (7.48)	–	–	32.67 (12.48)	–	–
Overall Reading Proficiency (%)	51.59 (11.03)	51.6	Developing	67.08 (17.71)	67.1	Developing

Distribution of Learners by Proficiency Level

Table 6 shows how the learners moved across proficiency levels. In the pre-test, all 15 learners (100%) read at the frustration level in accuracy and 14 (93.3%) were at the frustration level in comprehension. In the post-test, 6 learners (40.0%) reached the instructional level in accuracy, and 8 learners (53.3%) reached the instructional or independent level in comprehension. In letter-sound knowledge, 10 learners (66.7%) reached the Approaching Proficiency or Proficient level, compared with only 2 (13.3%) in the pre-test. Fourteen of the 15 learners improved their overall score. However, four learners remained at the Beginning level in word recognition; three of them, L04, L07, and L09, also made little or no progress in fluency and comprehension and will need more intensive support, a finding that will be considered in the reading enhancement action plan.

Table 6. *Distribution of Learners by Proficiency Level in the Pre-test and Post-test*

Reading Area	Level	Pre-test f	Pre-test %	Post-test f	Post-test %
Letter-Sound Knowledge	Proficient	0	0.0	5	33.3
	Approaching Proficiency	2	13.3	5	33.3
	Developing	9	60.0	3	20.0
	Beginning	4	26.7	2	13.3
Word Recognition	Proficient	0	0.0	0	0.0
	Approaching Proficiency	0	0.0	5	33.3
	Developing	4	26.7	6	40.0
	Beginning	11	73.3	4	26.7
Reading Fluency (Accuracy)	Independent	0	0.0	0	0.0
	Instructional	0	0.0	6	40.0
	Frustration	15	100.0	9	60.0
Reading Comprehension	Independent	0	0.0	3	20.0
	Instructional	1	6.7	5	33.3
	Frustration	14	93.3	7	46.7

Note. n = 15.

Significance of the Difference Between the Pre-test and Post-test (Objective 4)

Before testing the difference, the normality of the difference scores was examined using the Shapiro–Wilk test. As shown in Table 7, the difference scores in all areas were normally distributed ($p > .05$); hence, the paired-samples t-test was used.

Table 7. *Shapiro–Wilk Test of Normality of the Difference Scores*

Reading Area	W	p	Distribution	Test Used
Letter-Sound Knowledge	.898	.089	Normal	Paired t-test
Word Recognition	.920	.193	Normal	Paired t-test
Reading Fluency: Accuracy	.928	.253	Normal	Paired t-test
Reading Fluency: Rate (WCPM)	.924	.218	Normal	Paired t-test
Reading Comprehension	.927	.245	Normal	Paired t-test
Overall Reading Proficiency	.968	.820	Normal	Paired t-test

Table 8 shows that the post-test scores were significantly higher than the pre-test scores in all four reading areas, in reading rate, and in overall reading proficiency ($p = .002$ or lower), and none of the 95 percent confidence intervals of the mean differences includes zero. The null hypothesis that there is no significant difference between the pre-test and post-test reading proficiency levels of the learners is therefore rejected. The effect sizes, ranging from $d = 1.01$ to $d = 1.26$, are large based on Cohen's (1988)

benchmarks. As a robustness check, the Wilcoxon signed-rank test led to the same conclusions in all areas (z = 2.85 to 3.30, p = .004 or lower, r = .74 to .85). Because the study uses a one-group design and a small sample, these gains will be interpreted with caution, since factors other than the RIM, such as regular classroom instruction and maturation, may also have contributed to the improvement.

Table 8. *Paired-Samples t-test Results for the Pre-test and Post-test Scores*

Reading Area	Pre-test M (SD)	Post-test M (SD)	Mean Diff. [95% CI]	Test Statistic	p	Effect Size	Decision
Letter-Sound Knowledge	11.33 (2.58)	14.80 (4.16)	3.47 [1.78, 5.15]	t(14) = 4.41	< .001	d = 1.14 (Large)	Reject Ho
Word Recognition	12.07 (3.84)	17.47 (6.33)	5.40 [2.80, 8.00]	t(14) = 4.45	< .001	d = 1.15 (Large)	Reject Ho
Reading Fluency: Accuracy	75.47 (6.41)	83.42 (10.39)	7.95 [4.43, 11.47]	t(14) = 4.84	< .001	d = 1.25 (Large)	Reject Ho
Reading Fluency: Rate (WCPM)	23.07 (7.48)	32.67 (12.48)	9.60 [5.30, 13.90]	t(14) = 4.78	< .001	d = 1.24 (Large)	Reject Ho
Reading Comprehension	3.40 (1.24)	5.27 (2.34)	1.87 [0.84, 2.89]	t(14) = 3.92	.002	d = 1.01 (Large)	Reject Ho
Overall Reading Proficiency	51.59 (11.03)	67.08 (17.71)	15.49 [8.70, 22.27]	t(14) = 4.90	< .001	d = 1.26 (Large)	Reject Ho

Note. Significance level = .05; Ho = There is no significant difference between the pre-test and post-test reading proficiency levels of the learners. CI = confidence interval. Effect size: d = 0.20 small, 0.50 medium, 0.80 large (Cohen, 1988).
