MAP-A Rationale Video v8 · Live Narration Script (1:45)

Read each line when its subtitle appears. In the no-narration video the subtitle shows 0.35 s before the cue so you can start on time. The boom lands at 1:22.8; pause one beat after it. Say Albay as al-BYE and Dijkstra as DIKE-struh.

Start	Finish by	Line
		Scene 1 · The problem
0:00.5	0:03.0	Start with one trip, from point A to point B.
0:03.5	0:06.8	Which jeepney do you ride, when do you arrive, and what do you pay?
0:07.3	0:11.6	In Albay, no machine-readable record of routes, stops, or fares can tell you.
0:12.2	0:13.7	Our timetable model can.
		Scene 2 · Why it matters
0:14.5	0:15.2	Zoom out.
0:15.7	0:22.1	The same model counts the schools, markets, and hospitals a person can reach in thirty minutes, and who is left out.
0:22.6	0:30.0	Sustainable Development Goals 3, 9, 10, and 11 ask for health, fair infrastructure, equality, and transport for all.
0:30.5	0:33.0	In Albay, there was nothing to measure that against.
		Scene 3 · The stakes
0:33.8	0:35.0	Now, an emergency.
0:35.5	0:38.9	The nearest hospital may be full, or lack the right level of care.
0:39.4	0:43.4	Maps show where hospitals are, not free beds or what a family can afford.
0:43.9	0:51.1	Our hospital mode collects free-bed reports by e-mail and sends the ambulance to the nearest hospital that can take the patient.
0:51.6	0:54.4	In an emergency, payment never delays the route.
		Scene 4 · How MCS comes in
0:55.2	0:57.9	You may be wondering: how does MCS come into play?
0:58.4	1:04.9	Mathematics turns open data into a graph: every stop a vertex, every ride an edge with a travel time.
1:05.4	1:09.6	Computing searches it with Dijkstra's algorithm for the exact fastest trip.
1:10.1	1:14.0	Those times count access, measure inequality, and price every fare.
1:14.5	1:18.9	For a patient, it finds the fastest hospital with the right care and a free bed.
1:19.6	1:21.9	Twelve results, proven, then verified.
		Conclusion (after the boom)
1:23.3	1:25.8	MAP-A will not add one bed to Albay.
1:26.3	1:31.2	But once hospitals report, it will tell him which one has a free bed and the right care.
1:32.3	1:34.5	Distance tells you where the hospital is.
1:35.2	1:37.5	Access tells you whether it can help in time.

Title card from 1:38.5 to 1:45: no narration. SDGs on screen: 3 (Target 3.8), 9 (Target 9.1), 10 (Targets 10.2, 10.3), 11 (Target 11.2).
